

## Tribon AR70

Artikelnummer: 15320

### tribon ar70

The Tribon AR70 from the Colorgetix Colorlamps series is a LED lighting source with wattage of 7W. The color temperature is 2500K. The light beam of the Tribon is 36°. The working voltage is Max 450mA. The Tribon AR70 has an IP standard of IP20 and is therefore not water resistant.

### Colorgetix Colorlamps

The 360° rotating LED makes the Colorlamps unique. The difference between LED and halogen is almost not noticeable. Because of the special reflector in the Colorlamps, the Colorlamps reflect the light like a traditional halogen lighting source. With the use of this reflector the LED light sources of the Colorgetix will not be blinded. The Colorlamps LED lighting sources are perfectly dimmable and create a perfect warm light (2500 K).

### Connecting Tribon AR70

The Tribon AR70 can be connected with different power controlled drivers. The power controlled drivers can be dimmed in certain ways. The Tribon AR70 needs a power controlled power supply. The fittings that need a power controlled driver are recognizable by the additional "Constant Current" or a specification as mA like 450mA. A power controlled LED module is always connected in a series. A power controlled LED driver allows all the connected modules to receive the same power. The output voltage could always vary. The power controlled drivers are primarily dimmable, push, 1-10V and/or DALI dimmable. Take a look at the Colorgetix Colordrivers for all the possibilities.

### WARRANTY

ColorGetix pays the utmost attention to its products, which quality is constantly monitored. Our products have a long life, but how small the chance is, it can always happen that a product fails. For products that do not seem to work, by manufacturing faults or because of us, we will provide a replacement product within the warranty period. If the product stops working due to improper use and we have come to remedy the problems, then we are forced to make charges. ColorGetix not be liable for any consequential damages.

Colorgetix has a wide range of LED lighting and offers a wide range of possibilities for various lighting projects. If you choose Colorgetix, you are assured of reliable and high quality products. Colorgetix can deliver the LED strip in a plug & play manner.
